

ACPF-7005

PCS (A-G) / UMTS Band 2 Tx Bandpass Filter

Data Sheet

Description

The Avago ACPF-7005 is a miniaturized Bandpass Filter designed for use in handsets and mobile data terminals operating in the PCS (Blocks A-G)/UMTS Band 2 Tx frequency range (1850.6 – 1914.4 MHz).

In typical cellular phone architectures, this transmit filter is placed between the driver amplifier and the power amplifier. The high out-of-band rejection of the ACPF-7005 enhances receiver sensitivity by reducing noise in the Rx band which would otherwise be amplified by the transmit chain. The high rejection feature keeps unwanted signals out of the receive path.

The Avago ACPF-7005 rivals split-band surface acoustic wave (SAW) transmit filters. As a high rejection, single filter solution, the ACPF-7005 eliminates the need for switching. This saves board space and external components, while eliminating switch loss and reducing programming complexity.

The ACPF-7005 is designed with Avago Technologies' innovative Film Bulk Acoustic Resonator (FBAR) technology, which makes possible ultra-small, high-Q filters at a fraction of their usual size. The excellent power handling capability of FBAR bulk-mode resonators supports the high output power levels used in mobile communications applications, while adding virtually no distortion.

The ACPF-7005 also utilizes Avago Technologies' advanced Microcap bonded-wafer, chip scale packaging technology. This process allows this filters to be assembled into a molded chip-on-board module with an overall size of only 1.6 x 2.0 mm and maximum height of 1.1 mm.

Features

- 50 Ω Input/Output
- High rejection enables elimination of switches
- Miniature Size
 - 1.6 x 2.0 mm size
 - 1.1 mm Max Height
- High Power Rating
 - +30 dBm Abs Max Tx Power
- Environmental
 - RoHS 6 Compliant
 - Halogen free
 - TBBPA Free

Specifications

- Performance guaranteed -10° to $+85^{\circ}\text{C}$
 - Tx Band Insertion Loss: 3.5 dB Max
 - Rx Band Rejection: 33 dB Min

Applications

Handsets or data terminals operating in the PCS (Blocks A-G)/UMTS Band 2 frequency range.

Functional Block Diagram

ACPF-7005 Electrical Specifications^[2], $Z_0=50\ \Omega$, T_C ^[1] as indicated

Symbol	Parameter	Units	– 10°C			+25°C			+85°C		
			Min	Typ ^[3]	Max	Min	Typ ^[3]	Max	Min	Typ ^[3]	Max
S21	Insertion Loss in Tx Band	dB									
	1850.6 – 1852.0 MHz				3.5		2.0	3.5			3.5
	1852.0 – 1912.0 MHz				3.2		1.0	3.2			3.2
	1912.0 – 1914.4 MHz				3.5		1.1	3.5			3.5
Δ S21	Amplitude Ripple (p-p) 1850.6 – 1852.0 MHz	dB			0.5		0.1	0.5			0.5
Δ S21	Amplitude Ripple (p-p) within any 5 MHz Channel in Tx Band (1850.6 – 1914.4 MHz)	dB			1.0		0.5	1.0			1.0
S21	Attenuation, 0 – 1580 MHz	dB	25			25	35		25		
S21	Attenuation in Rx Band (1930.6 – 1994.4 MHz)	dB	33			33	57		33		
S21	Attenuation in Tx 2 nd Harmonic Band (3700 – 3829 MHz)	dB	10			10	14		10		
S21	Attenuation in Tx 3 rd Harmonic Band (5550 – 5743 MHz)	dB	10			10	13		10		
S11	Return Loss (SWR) in Tx Band	dB	7		(2.6)	7	18	(2.6)	7		(2.6)
S22	(1850.6 – 1914.4 MHz)										
							(1.3)				

Notes:

1. T_C is the case temperature and is defined as the temperature of the underside of the Filter where it makes contact with the circuit board.
2. Min/Max specifications are guaranteed at the indicated temperature (unless otherwise noted).
3. Typical data is the average value (arithmetic mean) of the parameter over the indicated band at the specified temperature. Typical values may vary over time.

Absolute Maximum Ratings^[1]

Parameter	Unit	Value
Storage temperature	°C	–40 to +125
Maximum RF Input Power	dBm	+30

Maximum Recommended Operating Conditions^[2]

Parameter	Unit	Value
Operating temperature, T_C ^[3] , Tx Power $\leq$ 29 dBm	°C	–30 to +85

Notes:

1. Operation in excess of any one of these conditions may result in permanent damage to the device.
2. The device will function over the recommended range without degradation in reliability or permanent change in performance, but is not guaranteed to meet electrical specifications.
3. T_C is defined as case temperature, the temperature of the underside of the duplexer where it makes contact with the circuit board.

Figure 13. Suggested PCB Layout (top view)

A PCB layout using the principles illustrated in the figure above is recommended to optimize performance of the ACPF-7005.

Note: This filter is symmetrical, so either port can be used for either the Input or Output.

It is important to maximize isolation between the Input and Output ports to maintain out-of-band rejection.

High isolation is achieved by: (1) maintaining a continuous ground plane around the I/O connections, and (2) surrounding the I/O ports with sufficient ground vias to enclose the connections in a "Faraday cage."
